Trim tabs are completely different from the engine's trim and tilt system though. Trim tabs are used to straighten out the boat or compensate for heavy loads on one side or the other of the boat. We know that the trim is used to get more of the boat out of the water when running, and for storing the engine.

The tilt and trim unit allows you to optimize the performance of your boat by adjusting the angle of the engine, which, in turn, adjusts the boat's running surface. The ability to tilt and trim your engine improves boat performance under a wide variety of conditions from smoothing out a rough ride in heavy seas to reducing draft in shallower waters.
