A regular expression (regex or regexp for short) is a special text string for describing a search pattern. You can think of regular expressions as wildcards on steroids. You are probably familiar with wildcard notations such as *.txt to find all text files in a file manager. The regex equivalent is «.*\.txt» .

Regular Expressions: The Complete Tutorial

Defines expressions between (and) as group and save characters that match the expression to a temporary area. A maximum of nine characters can be saved in a regular expression, and these characters can be referenced by symbols \1 to \9. (pattern) Matches pattern and captures sub-expressions of the match.

Regular Expression Metacharacters_Cloud Performance Test ...

However, delimiters cannot be used in complex semi-structured data because the field values also contain delimiters. In this case, the regular expression can be used to separate the fields. The regular expression is configured in Source Job Configuration. The migration source must be an object storage or file system, and File Format must be CSV.

Regular Expressions for Separating Semi-structured Text

...

You can create a semantic type based on a regular expression in Talend Dictionary Service and add it to the list of recognized data types in Talend Data Preparation. In Talend Data Preparation, not every type of data can currently be matched with one of the predefined semantic types. Italian social security numbers, also known as codice fiscale, are currently not recognized for example.
