For the last four centuries, scientists have aimed to provide us with an understanding of the world around us. By all appearances, science has made substantial progress during this time. But is this progress real or illusory? And if it is real, how has this progress been made? This four-week course will consider these important questions. Specific topics will include how scientists generate ...

Philosophy of Science - Class Central

The philosophy of science is concerned with all the assumptions, foundations, methods, implications of science, and with the use and merit of science. This discipline sometimes overlaps metaphysics, ontology and epistemology, viz., when it explores whether scientific results comprise a study of truth.

Philosophy, Science and Religion ... - Class Central

Philosophy of science has a practical aim: to develop principles of basic scientific research, which when implemented facilitate the practice of basic research. This aim is essentially pragmatic rather than pedantic, and it thus makes philosophy of science consequential for the practices of basic-science research.
