They cause earthquakes because edges of tectonic plates are jagged rather than smooth. As the plates grind past each other, the jagged edges strike each other, catch, and stick, "locking" the plates in place for a time. Because the plates are locked together without moving, a lot of stress builds up at the fault line.

### **Plate Tectonics (WebQuest) Flashcards | Quizlet**

- Tectonic plates are made of both continental and oceanic crust. The land that we see is the continental crust, about 30 kilometers (19 mi) thick. Under the sea, the heavier oceanic crust is much thinner, about 8 to 10 kilometers (5 to 6 mi) thick.

The zone below the lithosphere. It is more 'plastic' than the lithosphere so it is easier to bend and move. crust. The most outer solid portion of the planet Earth.

### **Science Plate Tectonics Crossword Flashcards | Quizlet**

Plate tectonics refers to the slow movement of the earth's crustal plates. These plates were formed when earth's crust broke apart at the beginning of the global Flood. Due to unique geological conditions, these plates moved rapidly, reshaping earth's surface. This is known as Catastrophic Plate Tectonics
