Solutions Acids And Bases

Mixture of a Strong Acid and a Strong Base. On mixing a strong acid and strong base neutralization ($\text{pH} = 7$) takes place. The resulting solution may be an acid or base depending on the Concentration. Say, N_1 , V_1 is the strength and volume of the strong acid and N_2 , V_2 is the strength and volume of the strong base.

Given acids or bases at the same concentration, demonstrate understanding of acid and base strength by: 1. Relating the strength of an acid or base to the extent to which it dissociates in water 2. Identifying all of the molecules and ions that are present in a given acid or base solution. 3. Comparing the relative concentrations of molecules and ions in weak versus strong acid (or base ...

In acid -base chemistry, the amount by which an acid or base dissociates to form H^+ or OH^- ions in solution is often given in terms of their dissociation constants (K_a or K_b). However, because these values are often very small for weak acids and weak bases, the p-scale is used to simplify these numbers and make them more convenient to work with.

Bases have properties that mostly contrast with those of acids. Aqueous solutions of bases are also electrolytes. Bases can be either strong or weak, just as acids can. Bases often have a bitter taste and are found in foods less frequently than acids. Many bases, like soaps, are slippery to the touch. Bases also change the color of indicators.

The Brønsted-Lowry Definition In 1923, chemists Johannes Nicolaus Brønsted and Thomas Martin Lowry independently developed definitions of acids and bases based on the compounds' abilities to either donate or accept protons (H^+ ions). In this theory, acids are defined as proton donors; whereas bases are defined as proton acceptors. A compound that acts as both a Brønsted-Lowry acid and base ...

acids and bases deal with strong acids and bases. Strong acids, like HCl or HNO₃, are such good proton donors that none of their own molecules can remain in aqueous solution. All HCl molecules, for example, transfer their protons to H₂O molecules, and so the solution contains only H₃O⁺ (aq) and Cl⁻ (aq) ions.

Bases are the chemical opposite of acids. Acids are defined as compounds that donate a hydrogen ion (H⁺) to another compound (called a base). Traditionally, an acid (from the Latin acidus or acere meaning sour) was any chemical compound that, when dissolved in water, gives a solution with a hydrogen ion activity greater than in pure water, i.e. a pH less than 7.0.
